

60.4511.01 Bluetooth alarm clock with indoor climate

What is initially striking about the Bluetooth alarm clock is the very clear display. The time is displayed particularly large and is readable from afar. Optionally, the display can be switched to the indoor climate or an automatically display change.

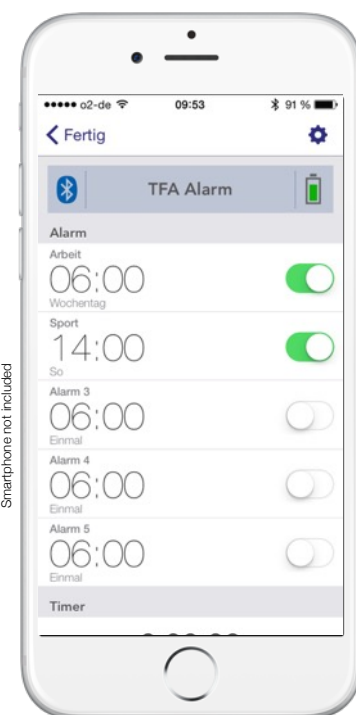

Convenient alarm setting by smartphone

But the special feature of this Bluetooth alarm clock is the convenient operation by smartphone. Many alarm functions can be easily controlled and adjusted using a free app. Configure up to 5 different alarms, set different alarm times for the week days and individual alarm tones and volumes.

Monitoring the indoor climate

In addition, the Bluetooth alarm clock also monitors the indoor climate. The clock records continuously the values for temperature and humidity and through the app, you can query the values. A graphic display gives you a quick overview of your living environment.
