ANEMOMETER

42.6002.02 VAAVUD

Anemometer for Smartphones

The anemometer makes (almost) any smartphone into an indispensable companion for all sailors, kite surfers and outdoor enthusiasts. The small **high-tech device** works completely **without electronics** and is compatible with iPhone 4 (or higher), Samsung Galaxy S3 (or higher) and HTC One.

Turn your smartphone into an anemometer

Download Free App and plug the device into the headphone socket of your smartphone and hold it into the wind. The app show you the current wind speed, the average of the measurement and the maximum measured wind speed in knots, kilometers per hour, meters per second or Beaufort. A graphical real-time capture registers each measurement and displays this on the **live map** showing the measurements for all users to view.

- **Innovative anemometer**
- **Smooth-running teflon bearings for precise measurements**
- **Robust design of high-strength ABS / PC plastic**
- **Small, handy, perfect for travelling**
- **No batteries needed**
- **Display the wind speed in knots, km / h, m / s or Beaufort**
